- Java
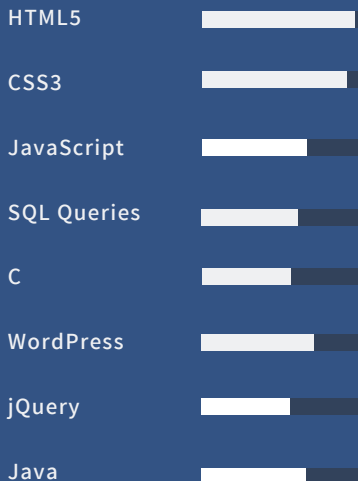

PERSONAL PROFILE

BE in Information Technology with experience in Java, HTML5, CSS, JavaScript and jQuery. Ability to translate requirements into innovative software solutions. Looking to start a career as an entry-level professional.

PROJECTS

Android Apps

- Lead a project team to develop a system that enhances the customers experience of shopping at a physical store.
- This includes making a client side android app that helps customers to scan and buy products on their mobile phone itself without having to go to a cashier.
- Inventory app to add and retrieve product data to and from cloud database(Firebase), from the mobile phone itself.
- Created an app to count crowd in a defined area with pinpoint precision in real time.
- Created a telephone billing application, with client as well as administrator functions.

Web Applications

- Created YellowPages, a fully functioning e-commerce website that enabled people to purchase used books. This also included inventory functions.
- Created a web application to input and retrieve data to and from firebase database.
- Learned and made use of the functions of Firebase cloud to achieve this task.
- Created and deployed an Ecommerce landing page and multiple other projects on GitHub.
